Overview

When configuring an overtime or custom pay policy, the following condition settings allow you to fine-tune the policy's details as it relates to the hours that are included in the condition trigger:

- Include non-qualifying hours after threshold
- Include non-qualifying hours before threshold
- Trigger for whole shift if condition is satisfied
- Trigger only if all hours qualify

This article provides an overview of the various configurations available for these settings, along with examples of advanced use cases.

Include non-qualifying hours after threshold

When the condition is configured for *more than* the defined number of hours and the *Include non-qualifying hours after threshold* setting is enabled (checked), after the threshold is met, all subsequent hours are considered qualifying, even if they don't match the filters. When disabled, only hours matching your filters are considered qualifying. The condition triggers if ANY hours exceed the threshold.

The default setting for *Include non-qualifying hours after threshold*, when an employee has worked more than... is checked or enabled. If you don't want to include non-qualifying time in the condition's trigger, you can disable this option.

The *Include non-qualifying hours after threshold* setting is only relevant if your rule includes an additional condition, such as defining *Specific days and times*, *Hours worked in lookback period*, *Rates / Dimensions / Jobs*, etc. that make your rule more precise.

Example 1

- **Condition:** If an employee works more than 8 hours in job code A in a week
- **Situation:** An employee who works 8 hours in job code A on Monday and 8 hours in job code B on Tuesday.
- ***Include non-qualifying hours after threshold setting enabled (checked, default):*** The time worked on Tuesday is counted in the trigger period, even though Tuesday was worked at code B.
- ***Include non-qualifying hours after threshold setting disabled (unchecked):*** The time worked on Tuesday does not trigger the action because it doesn't qualify as part of job code A.

Example 2

- **Condition:** When an employee has worked *more than* 4 hours per shift on a weekday, they get paid an additional premium of \$1/hour.
- **Situation:** An employee works from 6 pm Friday to 2 am Saturday.
- ***Include non-qualifying hours after threshold setting enabled (checked, default):*** The employee earns the premium for the 6 hours they worked on Friday and the 2 hours they worked on Saturday, even though Saturday is not a weekday, because they are over the threshold.
- ***Include non-qualifying hours after threshold setting disabled (unchecked):*** The employee earns the premium for the 6 hours they worked on Friday. However, they do not earn the premium for the 2 hours they worked on Saturday, as it is not a weekday and they are not over the threshold.

Example 3

- **Condition:** When an employee works for more than 2 hours as a barista...
- **Situation:** An employee works hours 1-4 as a barista and hours 5-8 as a cashier.
- ***Include non-qualifying hours after threshold setting enabled (checked, default):*** Once the threshold is met by qualifying hours, ALL subsequent hours trigger the condition.
- Hours 1-2 as a barista: Count toward threshold
- Hours 3-4 as a barista: Trigger the condition
- Hours 5-8 as a cashier: Also trigger the condition even though they aren't worked as a barista

- ***Include non-qualifying hours after threshold setting disabled (unchecked):***

Only hours that match the filter criteria trigger the condition. In this example, that's hours worked as a barista.

- Hours 1-2 as a barista: Count toward threshold
- Hours 3-4 as a barista: Trigger the condition
- Hours 5-8 as a cashier: Don't trigger the condition because they aren't worked as a barista

Tip: If you're creating a policy that includes only an *Hours over/under threshold* condition, do not alter the default status of the *Include non-qualifying hours after threshold* setting (checked for over threshold; unchecked for under threshold).

Include non-qualifying hours before threshold

When the condition is configured for *less than* the defined number of hours and the *Include non-qualifying hours before threshold* setting is enabled (checked), until the threshold is met, all hours are considered qualifying, even if they don't match the filters. When disabled, only hours matching your filters are considered qualifying.

The default setting for *Include non-qualifying hours before threshold*, when an employee has worked less than... is unchecked or disabled. If you want to include non-qualifying time in the condition's trigger, you can enable this option.

Example 1

- **Condition:** When an employee has worked *less than* 4 hours on a holiday, they get paid the non-holiday pay rate.
- **Situation:** An employee works a shift from 9 PM on July 3rd until 5 AM on July 4th (a holiday). Therefore, they work 3 hours on a non-holiday and 5 hours on a holiday.
- ***Include non-qualifying hours before threshold setting disabled (unchecked, default):*** The employee is paid the non-holiday pay rate only for the hours on July 4th from 12 AM until 4 AM.
- ***Include non-qualifying hours before threshold (checked):*** The employee is paid the non-holiday pay rate from July 3rd at 9 PM until July 4th at 4 AM.

Example 2

- **Condition:** When an employee works for fewer than 2 hours as a barista...
- **Situation:** An employee works hours 1-3 as a cashier and hours 4-5 as a barista.
- **Include non-qualifying hours before threshold setting disabled (unchecked, default):** Only hours that match the filter criteria trigger the condition. In this example,
 - Hours 1-3 as a cashier: Hours are not included in the trigger period, because they are not worked as a barista.
 - Hours 4-5 as a barista: Count toward the threshold
- **Include non-qualifying hours before threshold setting enabled (checked):** Hours that do not qualify as part of the condition are not counted in the trigger period.
 - Hours 1-3 as a cashier: Count toward the threshold even though they aren't worked as a barista
 - Hours 4-5 as a barista: Count toward the threshold

Trigger for whole shift if condition is satisfied

This setting only applies when the *within a shift* time period is selected. When *Trigger for whole shift if condition is satisfied* is enabled, and the condition is met, all of the hours in the shift will be considered qualifying. Put another way, if any time in the shift meets the condition, then entire shift is considered part of the trigger period. Normally, only the hours over/under the threshold will be considered qualifying.

Example

- **Condition:** When an employee works for more than 2 hours as a barista...
- **Situation:** An employee works hours 1-4 as a barista and hours 5-8 as a cashier.
- **Trigger for whole shift if condition is satisfied setting disabled (unchecked, default):**
 - Hours 1-2 as a barista: Don't trigger the condition because they're under the threshold.
 - Hours 3-4 as a barista: Trigger the condition.
 - Hours 5-8 as a cashier:
 - If *Trigger for non-qualifying time* is unchecked, these hours don't trigger the condition.

- If *Trigger for non-qualifying time* is checked (default), these hours qualify and trigger the condition.
- **Trigger for whole shift if condition is satisfied setting enabled (checked):** If any time in the shift meets the condition, the entire shift is part of the trigger period.
 - Hours 1-8: The entire shift meets the condition once the trigger is met after hour 2.

Trigger only if all hours qualify

When enabled, the condition is evaluated over the entire shift, and every hour of the shift must individually match the condition in order for the action to be applied. This setting is rarely enabled.

Example

- **Condition:** If an employee works less than 4 hours in the barista job code, pay them as though they worked in the cashier job code.
- **Situation:** An employee works 5 hours in the barista job code
- **Trigger only if all hours qualify setting disabled (unchecked, default):** The employee is paid at the cashier job code for hours 1-4, but not for the fifth hour.
- **Trigger only if all hours qualify setting enabled (checked):** The employee is not paid the cashier job code at all because not all hours qualify.
