Default permission profiles

Overview

Time Settings is Rippling's redesigned experience for configuring all time-related settings across scheduling, time tracking, and time off. It brings together settings that were previously spread across individual apps into a single, consistently organized location.

Note: The new Time Settings experience is currently available to a limited set of customers. For more information, contact Rippling Support or your Account Manager.

Overview of the changes

The redesigned Time Settings experience introduces the following updates:

- **Search:** A new search bar lets you find a settings page by keyword.
- **Consistent layout:** Settings pages across all sections now use a consistent format, replacing the previous mix of policy list pages and individual settings pages.
- **Consolidated permissions management:** Permission profiles for Time & Attendance, Scheduling, and Time Off can now be managed from a single location in Time Settings. Previously, these were only managed separately within each app.

Sections within the new Time Settings

To access Time Settings, follow these steps:

1. From the main sidebar, select **Time**.
2. From the *Time* sidebar, select **Time Settings**.

Time Settings is organized into the following sections:

- Time data
- Scheduling
- Attendance
- Time Off

- Permissions

Time data

The *Time data* section surfaces cross-time information that all time products rely on. It includes a read-only view of your organization's job dimensions. To make changes to job dimensions, navigate to **Company settings > Organizational data > Job dimensions**. Learn more in this article about [job dimensions](#).

Scheduling

The *Scheduling* section contains settings for managing your organization's schedules, including, but not limited to, shift and schedule templates, tags, open shifts, change requests, and schedule alerts.

Attendance

The *Attendance* section contains settings for configuring time tracking behavior across your organization, including, but not limited to, time tracking policies, overtime, breaks, shift inputs, and timesheet approvals.

Time Off

The *Time Off* section contains settings for configuring how time off works at your organization, including, but not limited to, leave types and accruals, holidays, limit periods, time off approvals, and delegation rules.

Permissions

The *Permissions* section is where you manage who has access to time-related features and what they can do. Learn more about the new permission profiles in the *Default permission profiles* section below.

Default permission profiles

Previously, permission profiles for time tracking, time off, and scheduling were only managed by super admins within the Permissions app, but now, app admins can

manage permission profiles for their apps directly from Time Settings, in a single location. With the new Time Settings, Rippling seeds your account with default permission profiles that you can assign to your teams.

Rippling provides the following default permission profiles for Time:

Permission profile	Privileges
Scheduling admin	Grants permission to create schedules and shifts, override approvals, configure Scheduling settings, set access rules, assign Scheduling permission profiles, and view Scheduling data in reports and other platform tools.
Schedule settings editor	Grants permission to create, edit, and delete Schedule settings and their membership rules and view Scheduling data in reports and other platform tools.
Scheduling data viewer	Grants permission to view Scheduling data in reports and other platform tools without giving access to the Scheduling app.
Schedule manager	Grants permission to create and edit shifts and approve change requests within the schedules for which they are assigned this profile. Managed in Time > Time Settings > Scheduling > Membership .
Schedule observer	Grants permission to view shifts within the schedules for which they are assigned this profile. Managed in Time > Time Settings > Scheduling > Membership .
Time & Attendance admin	Grants permission to create and edit timesheets and time entries, override approvals, configure timeclock devices, configure Time & Attendance settings and policies, set access rules, and assign Time & Attendance permission profiles.
Time & Attendance	Grants permission to create, edit, and delete Time & Attendance policies and their membership rules, and configure Time & Attendance

settings editor	settings.
Timesheets manager	Grants permission to create, edit, and delete timesheets and time entries, and override time entry approvals for employees within the permission scope.
Timeclock manager	Grants permission to register and configure timeclock apps and devices, badges, and biometric settings.
Time Off admin	Grants permission to create, edit, and delete time off requests, update balances and accruals, and override request approvals for employees within the permission scope. Also grants permission to create, edit, and delete leave types and policies and their membership rules, and configure Time Off settings.
Time Off settings editor	Grants permission to create, edit, and delete leave types and policies and their membership rules, and configure Time Off settings.
Time Off requests manager	Grants permission to create, edit, and delete time off requests, update balances and accruals, and override request approvals for employees within the permission scope.

Assign people to default permission profiles

App admins can assign individuals or groups to the default Time permission profiles for the apps they are admins for. For example, a Time Off admin can create and assign permission profiles that include only Time Off–related privileges.

To assign people to default permission profiles, follow these steps:

1. From the main sidebar, select **Time**.
2. From the *Time* sidebar, select **Time Settings**.
3. In the *Permission* section, click **Permissions settings**.
4. Find the permission profile to which you want to assign people and click the **> arrow** on the far right side of the profile's row.

5. In the *Membership rules* box, specify the supergroups or individuals you want to add to this default permission profile.
 6. The privileges and scope of default permission profiles cannot be edited.
 7. Click **Save**.
