Frequently asked questions

Overview

If you notice that an employee's tracked hours are displaying as *No pay schedule*, it may be due to the reasons listed in this guide. Review the reasons and steps to troubleshoot this issue.

Note: Hours that display as *No pay schedule* will not automatically sync to a pay run, regardless of the reason. You must manually add them to a pay run by creating an off-cycle pay run. Learn more in this article about [creating an off-cycle pay run in Rippling Global Payroll](#) or [creating an off-cycle pay run in Rippling Payroll](#).

Possible Reasons

Tracked hours may be displayed as *No pay schedule* in the following situations:

- The employee is not assigned to a pay schedule in Rippling Payroll.
- The employee was recently moved to a new pay schedule.
- The employee is a contractor with a contract type of *Milestone (Invoice by job)*.
- The employee's start date changed to a date in the future.

Troubleshooting Steps

Reason 1: The employee is not assigned to a pay schedule in Rippling Payroll

If the employee is not assigned to a pay schedule in Rippling Payroll, their time tracking hours will appear under *No pay schedule*.

To review the pay schedule to which the employee is assigned, follow these steps:

1. From the main sidebar, select **Payroll**.
2. From the *Payroll* sidebar, select **Payroll Overview**.
3. Select the **People** tab > **Payroll ready** sub-tab.
4. Search for the employee's name.

5. Review the pay schedule to which the employee is assigned in the *Pay schedule* column.

To assign the employee to a pay schedule, follow these steps:

1. Click the **expand arrow** in the employee's *Pay schedule* column.
2. Select the appropriate pay schedule.

Once assigned, all hours logged by time tracking moving forward will appear under the timecard linked to this pay schedule.

Reason 2: The employee was recently moved to a new pay schedule

If an employee was recently assigned to a pay schedule, it may take 12–24 hours for the new timecard to generate under their assigned schedule.

- Hours logged before the change will remain under *No pay schedule*.
- Hours logged after the change will appear under the new pay schedule's timecard.

Note: When a worker is removed from a Global Payroll pay run, their time entries are automatically moved to *No pay schedule*. For the next pay period, their timecards will appear under the appropriate pay schedule as expected, unless they are also removed from that pay run.

Reason 3: The employee is a contractor with a contract type of Milestone (Invoice by job)

Contractors with the *Milestone (Invoice by job)* contract type are not automatically included in pay runs, so their hours will always appear under *No pay schedule*.

To review a contractor's contract type, follow these steps:

1. Search for the contractor in the Rippling search bar.

2. Select their name to open their Rippling profile.
3. Select the **Role information** tab.
4. Review the *Select contract type* field.

If the contractor should be paid based on hours worked each pay period, the contract type must be changed to *Time tracking*. Learn more in this article about [supported contract types](#).

To change the contractor's contract type to *Time tracking*, follow these steps:

1. Click **Edit** in the *Role information* box.
2. Locate the *Select contract type* field.
3. **Select contract type:** Select **Time tracking**.
4. **Do you want to add [contractor's name] to a pay schedule so their approved hours are pushed to Rippling's payroll product for payment?** Select **Yes**.
5. Click **Next**.
6. Complete the remainder of the profile update flow.

After updating, hours logged moving forward will show under the correct pay schedule in time tracking and will sync to Payroll when approved.

Reason 4: The employee's start date changed to a date in the future

When an employee's start date is changed to a future date, Rippling considers them inactive for all dates before the new start date. Since an employee must be active in Rippling to be assigned to a pay schedule, their previous time entries are moved to the *No Pay Schedule* category and time entries in this category do not sync to Payroll upon approval. This only impacts timecards that are in the pending or approved status. Timecards that are already in the paid status remain under the pay schedule they were processed with.

Once the employee's new start date is reached and they become active again, the Rippling automatically assigns the timecards to the correct pay schedule based on your pay schedule membership configuration.

Frequently asked questions

Why can I only view an employee's timecard by week?

If an employee is assigned a *No Pay Schedule* in Rippling Payroll, their timecards are always displayed in a weekly format. The timecard view cannot be changed to bi-weekly, semi-monthly, or monthly for these employees.

Why would an employee's pay schedule display an inactive in Time?

This occurs if one of the following conditions is met:

- **No active pay periods:** All known pay periods for the pay schedule ended more than 7 days ago, and there are no future pay periods generated.
- **Deleted pay schedule:** The pay schedule has been deleted.
